

Advanced Price Action Theory in Action

"That is one order block with a lower time frame order block and a fair value gap — you can take that trade if you know what you're looking for."

0:03 -
1:30

■■ OPENING — Purpose of This Lesson

Framed as an "extra lesson" — practical follow-up to last night's advanced market structure video.

"It's one thing to talk about it and provide the basis as to what I'm doing when I'm doing these executions — when I'm running these demo accounts up really fast — what am I doing, how am I doing it."

0:24 - 0:38

Demo account ran to \$256,000 that morning, described as no longer useful for students at that scale.

"It's too fast of growth and the acceleration just makes it — you have no connection to it if you don't know how to do this and you're new."

0:55 - 1:05

Core premise: same principles apply whether demo or live.

"It does not matter — the same principles are applied whether you're trading with a live account or if you're trading with a demo account and you're learning."

1:11 - 1:20

1:31 -
8:45

■ ■ WHY DEMO — Not Trading Live Right Now

Already hit all monthly objectives — bearish on equities — does not want to expose live gains to heightened geopolitical risk.

"Because of the heightened volatility, because of the uncertainty and the likelihood of price action moves that would be unexpected even for me... I don't feel confident or willing to risk after being profitable in live trading."

1:39 - 2:10

States a weekly, daily, and monthly objective framework.

"There's an objective I look for for the week. There's an objective I try to aim for for the day. And there's something I'm aiming for for a goal for the month."

2:22 - 2:31

MONTHLY GOAL BEING DEMONSTRATED

"Aiming for 20 per month... 20% isn't money — it's a percentage. The compounding effects of that is astonishing."

Compliance note stated explicitly: demo account used because not licensed to give trade advice — protects both parties.

"If I was wrong — you don't take a financial loss. And if I'm right — you can't make money and get tricked into thinking that the only way you're gonna make money is to follow me."

9:11 - 9:23

3:36 -
6:12

■ ■ PREREQUISITES Before Live Trading

"If you've been consistent with a demo account for six months — then and only then would I — not necessarily that you need to do this — but I would then only at that time consider maybe going into live fund trading."

4:03 - 4:17

The documented trading plan must answer: why entering, what to wait for, what causes entry, where stop loss goes, how much to risk, what to aim for, whether to take partials.

"You have to know those things in advance. You can't determine them once you enter the marketplace — and that's what retail traders do."

6:52 - 6:59

Readiness test stated plainly:

"If you feel this tug of war — this butterfly feeling in your stomach where you just can't relax and you're engaging in the marketplace — you're not ready. That's the bottom line."

6:01 - 6:14

9:32 -
11:11

■ ■ MARKET CONTEXT – NQ Setup This Morning

Price went below a prior low. Overall bias is bearish but does not want to short — looking for retrace up into an imbalance to work long.

"It could potentially trade up into this up closed candle here... so that's kind of like the magnet or the draw on liquidity."

9:47 - 9:57

ES had more upside energy than NQ — NQ described as "lethargic" — but expectation is NQ follows.

"Usually these markets move in tandem... the tendency is that it will be drawn to the same degree that the other indices were — so if ES was higher, NQ which is Nasdaq futures should be brought higher in sympathy."

10:30 - 11:02

"All boats rise in high tide" — 11:02

11:12 -
13:51

■ THE ORDER BLOCK – Down Closed Candle Rules

Hourly chart shows: down closed candle after a run up → retraced into gap. Buy side liquidity resting above relative equal highs (~14,110).

"I'm going to watch to see if it can trade back down into that — because if it does I'm going to treat that as a bullish order block."

13:26 – 13:33

BULLISH MOVE RULE

"If the move has been bullish — down closed candles should not be violated. Down closed candles should not be violated. They're going to act as support."

BEARISH MOVE RULE

"Bearish market moves — up close candles should not be breached and broken through."

13:52 -
16:05

■ PSYCHOLOGY – Why Neophytes Collapse Trades Early

When bearish and watching a potential up close candle form — inexperienced traders panic out even when profitable.

"It's that overwhelming uncertainty that eats at you like mental cancer — it just literally makes you want to just get out of the trade even when you're in profit."

14:22 – 14:36

Root cause: insufficient time forward-testing the same scenarios repeatedly.

"If you don't have the wherewithal and the experience of submitting to these ideas and watching them come to fruition over and over again — months of experience, not just a week or day."

14:47 – 14:58

Time of day flagged as important — developed in next segment.

"Time of day is important — so I'm watching when price comes back down into it here."

15:51 – 15:56

16:06 -
17:22

■ MARKET STRUCTURE — Intermediate Term Low & Relative Equal Highs

Identifying the swing low:

"We do have a low that has a higher low to the left and a higher low to the right."

16:12 - 16:14

Overall read on structure:

"The overall market structure — it's likely to go higher and aim for a run above these highs. Buy side liquidity resting right up there."

16:32 - 16:42

Relative equal highs — the retail vs. algorithmic reading:

"Retail-minded traders are going to see that and say oh this is exactly what the text say about resistance — so it's acting as a ceiling. Price acting like a ceiling — what should they expect to see price do — go over."

17:03 - 17:22

17:23 -
18:20

★ CORE DEFINITION — The Three Required Elements

"That is how you determine your high probability bullish order block — it must have the imbalance coupled with the down closed candle and the underlying narrative that it's likely to go higher to reach for buy side liquidity. Period. That's it."

17:45 - 18:01

01

THE GAP

"the gap plus..."

02

DOWN CLOSED CANDLE

"...the down closed candle plus..."

03

BULLISH NARRATIVE

"...the idea that's likely to go for buy side liquidity"

Explicitly excludes other methods:

"There is no engulfing candle — does this — forget all that. You don't need that. It's the gap plus the down closed candle plus the idea that's likely to go for buy side liquidity. That's it."

18:06 - 18:18

18:21 -
20:23

■ ■ 9:30 EQUITY OPENING — The Judas Swing

Order block is touched right at/after the 9:30 equity opening. Initial move is in the wrong direction.

9:30 OPENING RULE

"Volatility — the initial move is technically the incorrect move going into the opening at 9:30. So this is like a judas swing."

"This is that fake move — don't chase this. And don't chase going higher right before the equity is opening 9:30 either."

19:17 - 19:25

What to look for instead — stated as a checklist:

"I'm looking for a discount market — low to high — I'm below 50%? Yes. I'm inside the order block? Yes. The equities opening has happened. I'm bullish and it has traded lower — so public is going to be thinking it's resistance, it's going to keep going down."

19:29 - 19:49

"It hits the order block and then rallies." — 20:04

20:24 -
22:16

■■ ENTRY SETUP – Lower TF Confirmation & Hierarchy

Zoomed to 5-minute: lower time frame order block + fair value gap inside the hourly order block.

"That is one order block with a lower time frame order block and a fair value gap — you can take that trade if you know what you're looking for and you understand bias narrative and where the liquidity matrix is likely to lead to later on — which is drawing up above this red level here."

20:24 – 20:43

TIME FRAME HIERARCHY

"There's a hierarchy — higher time frame to a lower time frame — with the idea framed on it's going higher for buy side."

Entry mechanics — overlapping / filling the gap:

"This was my entry — idea that it's overlapping filling in that gap and it's an order block here with a higher timeframe order block there."

21:40 – 21:47

Once the gap fills, the swing low becomes an intermediate term low:

"When it fills in that gap — once that happens — this becomes an intermediate term low. This low should not be taken out once it starts rallying — it should not come back down here."

22:03 – 22:16

22:17 -
24:06

■ SMART MONEY ACCUMULATION – Retracements Into Order Blocks

As price retraces into down closed candles, smart money buys again. This repeats with each new leg.

"Smart money traders are going to be buying more here. Like I did. Rallied. We have down close candles. We went above it. I'm not worrying about the market as long as it doesn't take out these two down close candles."

22:44 – 22:58

"It trades down — retraces down into what — an imbalance. Why? So smart money can buy again. Like I did."

23:08 – 23:13

Specific behaviour close to the profit objective:

"This is classic — it generally doesn't like to go all the way back in rebalance when it's that close to the profit objective. So the algorithm only has a small little retracement inside the fair value gap — so you would be a buyer just at that candle's low."

23:44 – 23:58

Confidence condition for holding through retracements:

"I trust that it's going to keep going higher as long as the down closed candles keep price above it — above what — above the down close candles that's going to be supporting each new leg higher."

24:39 – 24:55

24:57 -
26:35

■ ■ STOP LOSS MANAGEMENT

Initial stop — placed at mean threshold of bullish order block:

"Your stop was below the middle of this candle — that's the mean threshold of the bullish order block. So I don't think it's going to go down below that once I'm entering."

25:03 - 25:11

After price trades above the order block's high — stop must still stay below the candle's low:

"My stop-loss must remain below this candle's low — because it can dig into that candle — because it's going to act as an order block."

25:16 - 25:23

Premature stop placement — the mistake to avoid:

"If I put my stop loss inside this area here — I'm stopped out prematurely. Chances are you probably wouldn't have the wherewithal to get back in."

25:28 - 25:37

When to raise the stop — after price takes out the next set of down closed candles:

"The market rallies above — takes out these two down closed candles — now the stop can be raised from whatever would be below this down close candle — because the idea is these closed candles are one order block that should not be violated if it's bullish."

26:03 - 26:21

Invalidation — if stop is taken:

"If it comes down and breaks the low of these down closed candles — well there you go. You probably did the right thing by getting stopped out because it might be failing and going lower."

26:22 - 26:34

26:36 -
31:45

■ TRADINGVIEW DEMO – Execution Proof

Switches to live TradingView paper account. Execution arrows shown on chart — hover to confirm they are not photoshopped. Toggle: executions checkbox in TradingView settings.

"This is proving precision — it's proving theory in action — and it's proving that it's not flawed logic."

31:15 – 31:24

Explicitly distinguishes the methodology from other approaches:

"None of this is Elliott Wave. None of it's harmonic. None of it is supply and demand. None of this is retail — absolutely none of it."

31:27 – 31:37

31:46 -
34:07

■ PYRAMIDING – Position Sizing Structure

Three entries treated as one trade — largest size first, decreasing with each add.

"I'm pyramiding — I'm building the biggest position initially and then every time I buy in again I'm building it with a smaller position than I had prior to when I'm entering now — because I have all the equity behind that entry with three supporting the two I'm buying here."

32:41 – 33:01

CORRECT – STABLE PYRAMID

3 contracts ← entry 1 (largest)

2 contracts ← entry 2

1 contract ← entry 3

WRONG – INVERTED / UNSTABLE

1 contract ← entry 1

2 contracts ← entry 2

3 contracts ← entry 3 (largest)

"Imagine a pyramid upside down and it's balancing on its point — it's not a solid foundation — it's wobbly."

33:12 – 33:19

"I consider this all one trade — I don't consider this three separate trades. It's one trade — scaled in largest, middle, last portion — then it runs to my objective."

33:53 – 34:07

34:08 -
36:19

■ ACCOUNT MATH — Micro Account Demo Results

Instrument: Micro E-Mini Nasdaq. 1 point (4 ticks) = \$2. Hypothetical broker: AMP Futures.

+21%

*\$10,000 → \$12,111 in one trade
(3 + 2 + 1 = 6 micro contracts)
Technically requires only ~\$1,200 margin*

"Who cares if you gotta trade a micro account. Stop thinking you need a lot to make a lot — you don't. You need to be able to compound."

34:40 - 34:57

Stated trading frequency expectation:

"These likely form every single day but they absolutely form every single week — that is not an invitation for you to go out and say ICT said trade every day."

36:00 - 36:09

"What happens if you do that once a week — and that's your trade — and you stop — and once you hit it you end your trading."

35:32 - 35:39

36:20 -
43:06

■ CLOSING — Goals, Mindset & What This Approach Actually Is

On the necessity of goal-setting:

"If you don't aim for a target you're going to hit nothing — 100 percent of the time. You have to have a goal."

38:00 - 38:10

The relationship between winning trades and this methodology:

"If you start studying what I'm teaching you — you're gonna find that your trades that win have my information underneath. And when your trades fail — the things I'm teaching you here are missing."

41:17 - 41:29

Why price back-testing is better than books or courses:

"I'm teaching you how to go into price and price will teach you. It will teach you. It's repeating — so if it's repeating and you're looking at it constantly — you are training your eye to see what it does by default."

45:20 - 45:39

On the timeline for learning:

"I believe in six months of practice and looking at price action you can do this yourself — and do it consistently."

38:53 - 39:02

"Once you learn it — it's yours. You don't forget. It's like riding a bike."

42:55 - 43:02

CLOSING STATEMENT

"I'm humbly submitting to you — you have found it. It's not costing you anything. But it's going to require some work, it's going to require some time, effort."
